United States Army
Redstone Technical Test Center (RTTC)

How We Work

How We Work For Our Customers

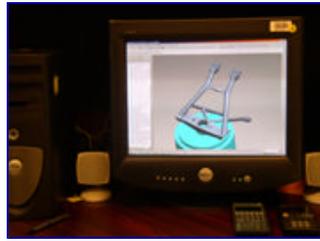

The Redstone Technical Test Center retains a small group of senior test management engineers that enable the Center to function as a cohesive unit, rather than as a number of separate test facility operations. This group serves as the single point of contact for customers. They provide responsive test planning, test management, and performance analysis support at Redstone Arsenal and other test sites.

The ability to respond to changing customer needs is a major reason the Test Center has attracted and successfully retained a large customer base. Being collocated with Program Managers; PEOs; the Research, Development, and Engineering Center; and other customers, allows key personnel to keep abreast of emerging technology and changes in testing, modeling, and simulation needs. This awareness of future needs and technologies is then applied to developing and constructing state-of-the-art test equipment, facilities, and software.

RTTC's talented and creative workforce welcomes the challenges that are inherent in testing "new technologies." These professionals take pride in addressing each customer's unique "opportunities" and meeting specific test and test support objectives. This continual development and application of innovations to the Center's test facilities, equipment, and methods assure our customers the flexible and responsive test programs they require.
